
Projects by Crema is committed to contributing to a resilient future. We recognise the global climate crisis and understand that our industry has a critical role to play in addressing this issue. We consistently look for opportunities to reduce our environmental impact while maximising our social impact, through implementing sustainable operations and initiatives across all areas of our practice.

We strive to minimise our ecological footprint today and tomorrow, by designing buildings around best-practice sustainability principles. We adhere to industry standards as our benchmark; however, we have developed our own set of targets to hold us accountable for achieving exceptional sustainability outcomes across our projects and initiatives.

Further to our commitment to deliver considered buildings with genuine longevity, we strive to lead by example and inspire others within our industry to improve their practices for a sustainable future.

Business Sustainability Targets:

1. Achieve carbon neutrality and obtain Climate Active Certification by 2028.
2. Reduce carbon emissions where possible including utilising energy efficient equipment and solar energy.
3. Reduce environmental impact and minimise waste during the construction of projects.
4. Source materials ethically from reputable and responsible suppliers.
5. Champion innovation and adopt alternative solutions that offer greater sustainability outcomes.
6. Partner with external consultants and suppliers that align with our values and sustainability objectives.
7. Continuously improve our practices and review our progress against core sustainability targets.
8. Champion transparency in our sustainability efforts by regularly sharing our progress towards meeting the commitments in this policy.
9. Use products made from renewable resources or recycled content where possible.
10. Encourage and support employees to reduce their carbon footprint.

Project Sustainability Targets:

In addition to our Business Sustainability Targets, each project we deliver works to its own sustainability framework. Our overarching goal is to create future-proof buildings that offer longevity with minimal environmental impact. Please refer to our Project Sustainability Reports for further details.

Application:

This policy applies to all operations at Project by Crema. This includes projects we deliver, events and activations we facilitate and our advocacy. Our team share mutual values and align with the core objectives specified in this policy.

Please note this policy is current as at August 2023 and will be reviewed annually in line with our sustainability reporting results. Core targets are subject to change to reflect the requirements of our evolving environmental landscape.
